Sat. 8am-noon
Closed the following Sat-
urdays: 1/29, 1/23, 2/6,
2/20

Why Recycle?

In the United States the average person creates nearly 1 ton of trash per year. With a population of approximately 30,000 people, that means Pine County creates roughly 30 tons of trash per year. This trash poses threats to ground water and air quality. Also it consumes land and requires costly landfill operation.

Reducing, reusing, and recycling offer environmental and economically friendly solutions to these problems.

Pine County has improved its recycling rate over the past several years but there is still significant room for improvement. The average rate of recycling for Greater Minnesota is 45.9%, meaning nearly half of the total waste is recycled. Unfortunately, in Pine County our recycling rate is only 34.4%, suggesting we have room for improvement with our recycling habits.

Use this guide to increase your recycling rate to help the environment while keeping the Pine County community green and clean.

Coming Spring 2016: Pine County Household Hazardous Waste Collection Facility!

Starting summer of 2016, Pine County will be opening a household hazardous waste collection facility, which will be open Tuesdays and Saturdays, June through September. The facility will be located in the Pine City Industrial Park (405 Airport Rd). Disposal of household hazardous waste at the facility will be free to Pine County residents. This will include such materials as paint, varnish, pesticides, acids, bases, adhesives, automotive products, wood preservatives, etc. For questions call the Pine County Solid Waste Dept.
